## PROJECT CASE STUDY

# Extreme Weather 24-hour Turnaround Helps Keep Lights On

Client  
Major utility provider

Location  
North Texas

## BACKGROUND

A major utility provider in North Texas needed next day response to begin repair of affected transmission and distribution lines when extreme weather, including wind gusts and heavy rain moved through the region.

## CHALLENGE

Getting the quote approved, delivering mats and executing the project within 24 hours could prove difficult when the initial request comes on a Saturday evening when it is hard to have access to all the different resources and personnel required.

## SOLUTION

- To meet the client's urgent request and need, Newpark Mats and Integrated Services:
- Collaborated with utility provider, contractors and our team of operations, project management, delivery team and crews to provide timely response.
- Provided initial quote same day and approved within hours
- Laid down first batch of mats by that same Sunday
- Installed 3,000 DURA-BASE composite mats in areas not accessible by normal means providing stable work platforms for cranes, bucket trucks, heavy equipment, and personnel with minimal terrain disturbance
- Mobilized teams from across Newpark landscape to help execute quickly and safely

## RESULTS

The client was able to gain rapid access to the affected transmission lines, allowing them to restore vital services to affected families in record time
